- Dimensions: 228mm x 133mm x 49.5mm
- Inner dimensions: 196mm x 96mm x 33mm
- Weight: 369g

Sterilizing your belongings

Plug the USB-C cable into the adapter/PC to power on the UV sterilizer. Press the sterilization button and the UV ray sterilization will start with the beeping sound and the indicator will turn green. The sterilization will turn off automatically in 10 minutes and the indicator light will turn off with two beeping sounds.

During the sterilization, if the user opens the cover, the sterilization stops automatically. Sterilization works only when the cover is closed.

Wireless charging

Plug the USB-C cable into the adapter/PC to power on the UV sterilizer. Open the top cover. Please note that your phone has to support wireless charging in order to use this function. Place your smartphone at the center with the screen facing up. The charging will continue even if sterilization is complete (if the USB Type-C cable is connected).

Application scope

The sterilization fits most mobile phones with screen length below 19cm and thickness below 3cm. You can also sterilize any goods that fit into the sterilizer, such as Bluetooth earphones, glasses, toothbrushes, jewelry, keys, etc.

When opening/closing the case, the magnetic cover gives airtight closure and a stable feel. The soft free-angle hinge and rubber stopper present a smooth touch to the user.
